Safety caution

- Before use, read carefully through the “Safety caution” section to ensure correct operation.
- The important contents concerned to the safety are described in the “Safety cautions”. Be sure to keep them. For Indications and their meanings, see the following description.

■ Warning Indications on the Air Conditioner Unit

Warning indication	Description
 <div style="border: 1px solid black; padding: 2px;"> WARNING ELECTRICAL SHOCK HAZARD Disconnect all remote electric power supplies before servicing. </div>	WARNING ELECTRICAL SHOCK HAZARD Disconnect all remote electric power supplies before servicing.
 <div style="border: 1px solid black; padding: 2px;"> WARNING Moving parts. Do not operate unit with grille removed. Stop the unit before the servicing. </div>	WARNING Moving parts. Do not operate unit with grille removed. Stop the unit before the servicing.
 <div style="border: 1px solid black; padding: 2px;"> CAUTION High temperature parts. You might get burned when removing this panel. </div>	CAUTION High temperature parts. You might get burned when removing this panel.
 <div style="border: 1px solid black; padding: 2px;"> CAUTION Do not touch the aluminum fins of the unit. Doing so may result in injury. </div>	CAUTION Do not touch the aluminium fins of the unit. Doing so may result in injury.
 <div style="border: 1px solid black; padding: 2px;"> CAUTION BURST HAZARD Open the service valves before the operation, otherwise there might be the burst. </div>	CAUTION BURST HAZARD Open the service valves before the operation, otherwise there might be the burst.
 <div style="border: 1px solid black; padding: 2px;"> CAUTION Never recover the refrigerant into the outdoor unit. </div>	CAUTION Never recover the refrigerant into the outdoor unit.
 <div style="border: 1px solid black; padding: 2px;"> CAUTION Do not climb onto the top side. Doing so may result in injury. </div>	CAUTION Do not climb onto the top side. Doing so may result in injury.

■ Explanation of indications

WARNING

Indicates possibilities that a death or serious injury of personnel is caused by an incorrect handling.

CAUTION

Indicates contents that an injury (*1) or property damage (*2) only may be caused when an incorrect work has been executed.

*1: "Injury" means a hurt, a burn, or an electric shock which does not require hospitalization or a long-term going to the hospital.

*2: "Property damage means an enlarged damage concerned to property, or breakage of materials.

- After installation work has finished, check there is no trouble by a test operation, and explain using method and maintenance method to the customers based on the Owner's Manual.
Please ask the customers to keep this Installation Manual together with the Owner's Manual.

WARNING

Ask a shop or a professional dealer to install the air conditioner.

If you will install by yourself, a fire, an electric shock, or water leak is caused.

Take measures so that the refrigerant does not exceed the limit concentration even if it leaks when installing the air conditioner in a small room.

For the measures not to exceed the limit of concentration, contact the dealer. If the refrigerant leaks and it exceeds the limit of concentration, an accident of oxygen shortage is caused.

Install the air conditioner at a place which is satisfactorily bearable to weight.

If strength is insufficient, the unit may fall down resulting in human injury.

Perform a specified installation work against a strong wind such as typhoon or earthquake.

If the air conditioner is imperfectly installed, an accident by falling or dropping may be caused.

If refrigerant gas leaks during installation work, ventilate the room.

If the leaked refrigerant gas approaches to fire, noxious gas may generate.

After installation work, confirm that refrigerant gas does not leak.

If refrigerant gas leaks in the room, and approaches to fire such as fan heater, stove or kitchen range, generation of noxious gas may be caused.

Never recover refrigerant in the outdoor unit.

Be sure to use a refrigerant recovery device to recover refrigerant in reinstallation or repair work.

Recovery of refrigerant in the outdoor unit is unavailable; otherwise a serious accident such as crack or human injury is caused.

A person qualified for the electric work should deal with the electric construction conforming to the regulations of the local electric company and the Installation Manual. Be sure to use the exclusive circuit.

If there is capacity shortage of the power supply circuit or incomplete installation, a fire or an electric shock is caused.

For cabling, use the specified cables and connect them securely so that external force of cable does not transmit to the terminal connecting section.

If connection or fixing is incomplete, a fire, etc. may be caused.

Be sure to connect earth wire.

Do not connect earth wire to gas pipe, water pipe, lightning rod, nor earth wire of telephone.

If grounding is incomplete, an electric shock is caused.

CAUTION

Do not install the air conditioner at a place where combustible gas may leak.

If gas leaks and is collected at surrounding the unit, the production of fire may be caused.

Be sure to attach an earth leakage breaker; otherwise an electric shock may be caused.

Using a torque wrench, tighten the flare nut in the specified method.

If the flare nut is exceedingly tightened, the flare nut is broken and a refrigerant leakage may be caused after a long time has passed.

WARNINGS ON REFRIGERANT LEAKAGE

Check of Concentration Limit

The room in which the air conditioner is to be installed requires a design that in the event of refrigerant gas leaking out, its concentration will not exceed a set limit.

The refrigerant R410A which is used in the air conditioner is safe, without the toxicity or combustibility of ammonia, and is not restricted by laws to be imposed which protect the ozone layer. However, since it contains more than air, it poses the risk of suffocation if its concentration should rise excessively.

Suffocation from leakage of R410A is almost nonexistent. With the recent increase in the number of high concentration buildings, however, the installation of multi air conditioner systems is on the increase because of the need for effective use of floor space, individual control, energy conservation by curtailing heat and carrying power etc.

Most importantly, the multi air conditioner system is able to replenish a large amount of refrigerant compared with conventional individual air conditioners. If a single unit of the multi conditioner system is to be installed in a small room, select a suitable model and installation procedure so that if the refrigerant accidentally leaks out, its concentration does not reach the limit (and in the event of an emergency, measures can be made before injury can occur).

In a room where the concentration may exceed the limit, create an opening with adjacent rooms, or install mechanical ventilation combined with a gas leak detection device.

The concentration is as given below.

Total amount of refrigerant (kg)

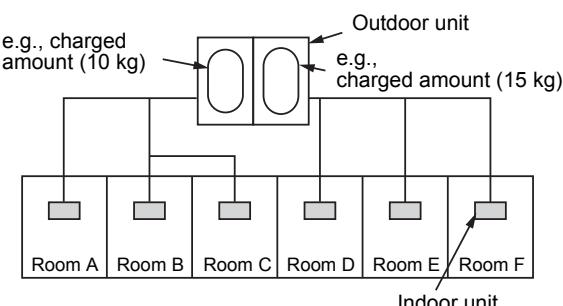

$$\frac{\text{Min. volume of the indoor unit installed room (m}^3\text{)}}{\leq \text{Concentration limit (kg/m}^3\text{)}}$$

Concentration limit

Compliance to the local applicable regulations and standards for the concentration limit is required.

NOTE 1:

If there are 2 or more refrigerating systems in a single refrigerating device, the amounts of refrigerant should be as charged in each independent device.

For the amount of charge in this example:

The possible amount of leaked refrigerant gas in rooms A, B and C is 10 kg.

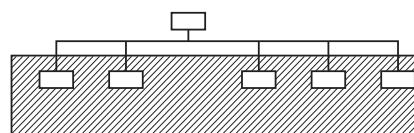

The possible amount of leaked refrigerant gas in rooms D, E and F is 15 kg.

Important

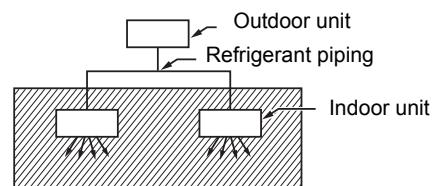

NOTE 2:

The standards for minimum room volume are as follows.

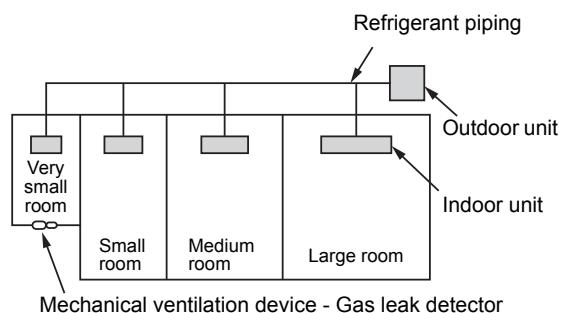

- (1) No partition (shaded portion)

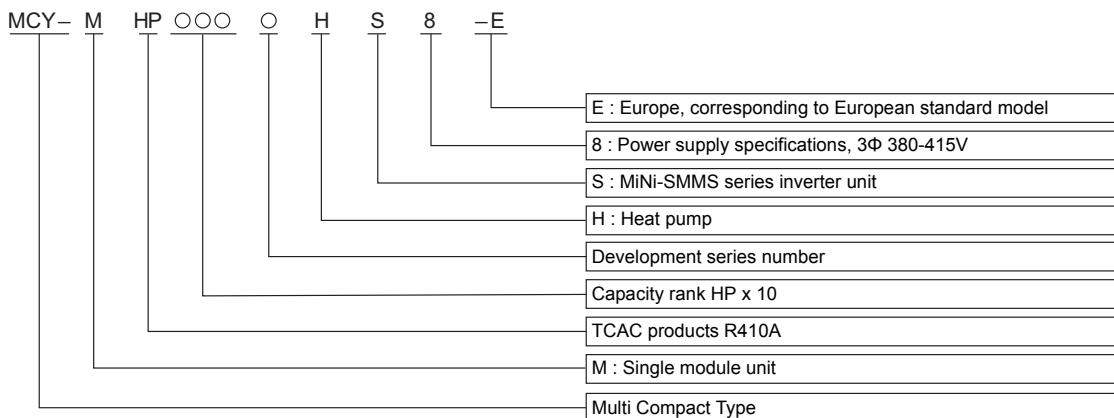

- (2) When there is an effective opening with the adjacent room for ventilation of leaking refrigerant gas (opening without a door, or an opening 0.15 % or larger than the respective floor spaces at the top or bottom of the door).

- (3) If an indoor unit is installed in each partitioned room and the refrigerant tubing is interconnected, the smallest room of course becomes the object. But when a mechanical ventilation is installed interlocked with a gas leakage detector in the smallest room where the density limit is exceeded, the volume of the next smallest room becomes the object.

1-1. Allocation standard of model name

1-2. Summary of system equipments

1-2-1. Outdoor units

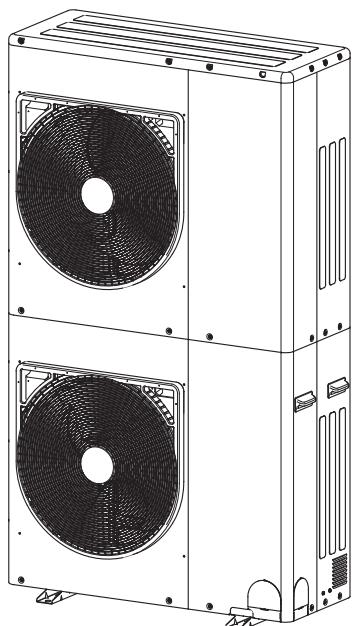

Corresponding HP	Inverter unit	
	8HP	10HP
Model name	MCY-MHP0806HS8-E	MCY-MHP1006HS8-E
Cooling capacity (kW)*1	22.4	28.0
Heating capacity (kW)*1	22.4	28.0
No. of connectable indoor units	12	16*2

*1 Rated conditions

Cooling : Indoor air temperature 27 °C DB / 19 °C WB. Outdoor air temperature 35 °C DB.

Heating : Indoor air temperature 20 °C DB. Outdoor air temperature 7 °C DB / 6 °C WB.

*2 When the No. of connecting indoor units exceeds 12, maximum total capacity code of indoor units will be 11.0HP.

1-2-3. Branching joints and headers

Name	Model name	Appearance	Remarks
Y-shape branching joint	RBM-BY55E RBM-BY105E		
4-branching header	RBM-HY1043E		
8-branching header	RBM-HY1083E		

1-2-4. PMV Kits

Name	Model name	Appearance	Remarks
PMV Kits	RBM-PMV0363E RBM-PMV0361U-E		RBM-PMV_U-E is not available for AP indoor unit.
	RBM-PMV0903E RBM-PMV0901U-E		RBM-PMV_U-E is not available for AP indoor unit.

1-2-5. Remote controllers

Name	Model Name	Remarks
Wired remote controller	RBC-AMT32E-E	
	RBC-AMTU31-E	TU2C-LINK Control
	RBC-AMS55E-EN/ES	-EN : English, Italian, Polish, Greece, Russian, Turkish -ES : English, Spanish, Portuguese, French, Dutch, German
	RBC-AMSU51-EN/ES	TU2C-LINK Control -EN : English, Italian, Polish, Greece, Russian, Turkish -ES : English, Spanish, Portuguese, French, Dutch, German
Compact wired remote controller	RBC-ASCU11-E	TU2C-LINK Control
Remote controller with schedule timer (7-day timer function)	RBC-AMS41E	
Simple wired remote controller	RBC-AS41E	
Wireless remote controller kit	RBC-AX32U(W)-E	For 4-way Air Discharge Cassette
	RBC-AXU31U-E	For 4-way Air Discharge Cassette (TU2C-LINK Control)
	RBC-AX32UM(W)-E	For Compact 4-way Cassette
	RBC-AXU31UM-E	For Compact 4-way Cassette (TU2C-LINK Control)
	RBC-AX32UW(W)-E	For 2-way Air Discharge Casette
	RBC-AXU31UW-E	For 2-way Air Discharge Cassette (TU2C-LINK Control)
	TCB-AX33CE	For Under Ceiling 8series, 1-way Air Discharge Cassette SH 4series
	RBC-AXU31C-E	For Under Ceiling, 1-way Air Discharge Cassette (TU2C-LINK Control)
	TCB-AX32E2	For All other units
	TCB-AXU31-E	For All other units (TU2C-LINK Control)
Schedule timer	TCB-EXS21TLE	
64 Central remote controller	TCB-SC643TLE	
	TCB-SC640U-E	TU2C-LINK Control

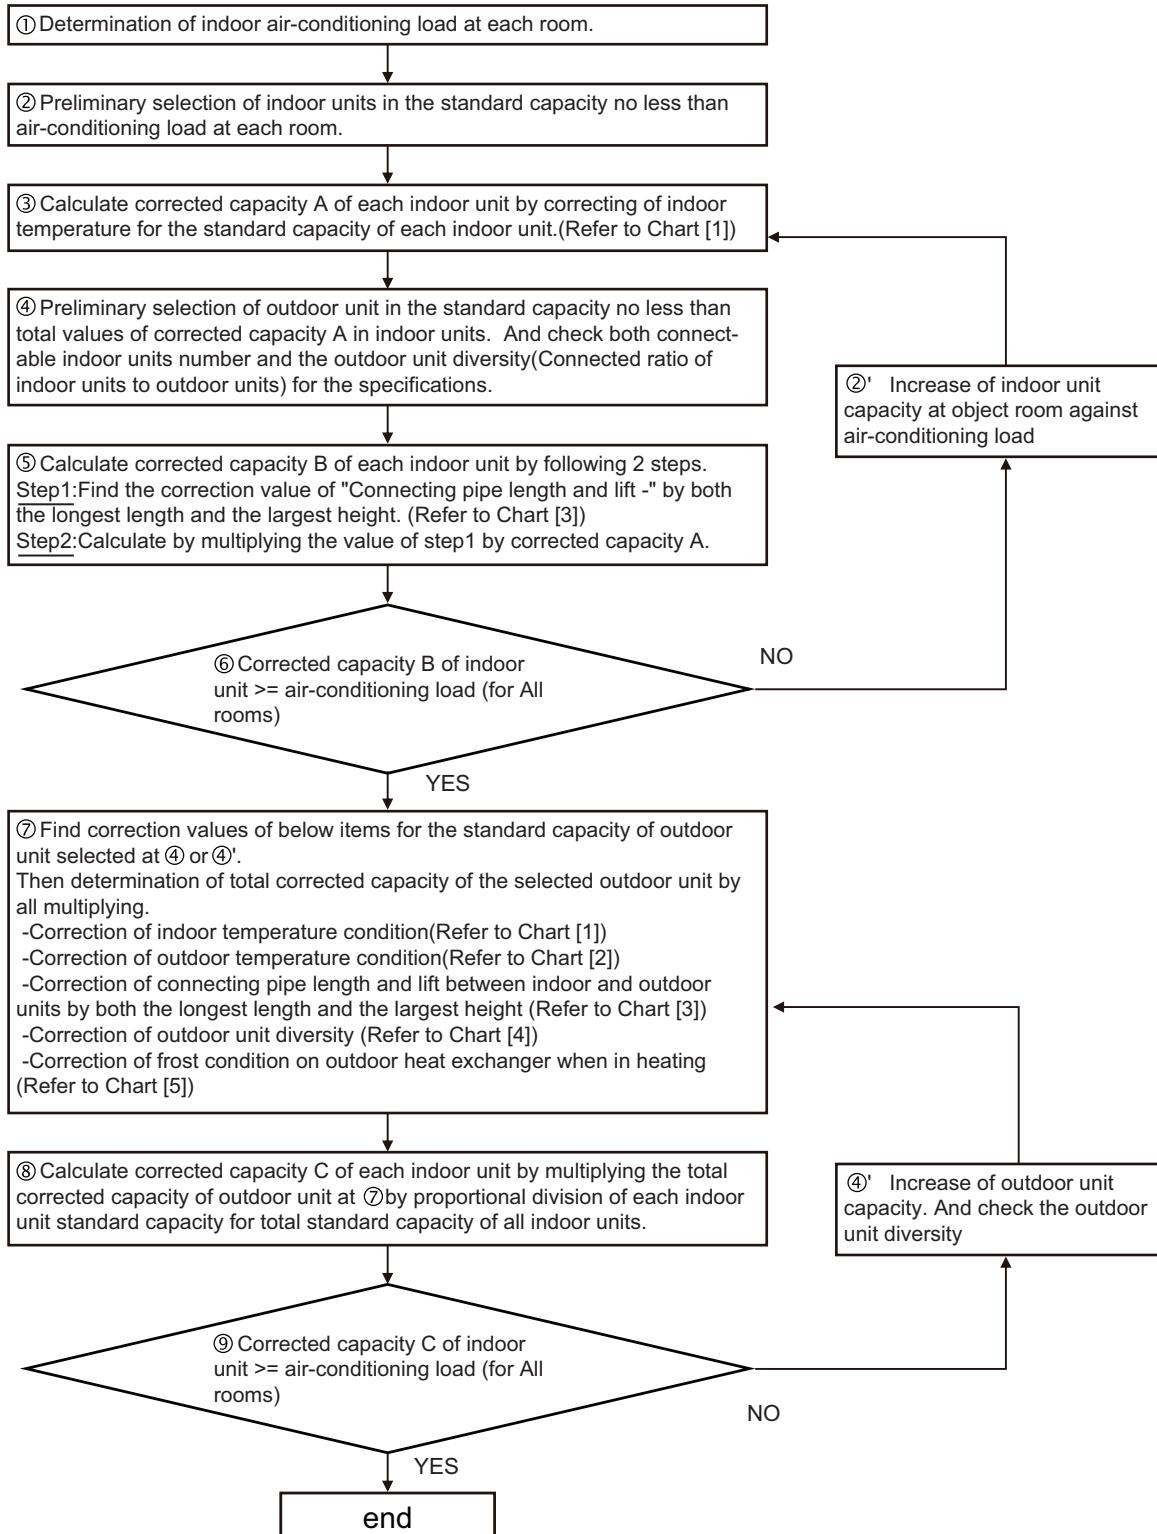

1-2-6. Optional PCB of outdoor unit

Name	Model Name	Remarks
Power peak-cut control board	TCB-PCDM4E	
External master ON/OFF control board	TCB-PCMO4E	
Output control board	TCB-PCIN4E	

1-2-7. Controls

Name	Model Name	Remarks
Touch Screen Controller	BMS-CT5121E	
	BMS-CT2560U-E	TU2C-LINK Control
Smart manager	BMS-SM1280HTLE	
Smart manager with data analyzer	BMS-SM1281ETLE	
Energy Monitoring Relay Interface	BMS-IFWH5E	
Relay Interface	BMS-IFLSV4E	
Digital I/O Relay Interface	BMS-IFDD03E	
LonWorks LN Interface	TCB-IFLN642TLE	
Modbus Interface	TCB-IFMB641TLE	
	BMS-IFMB1280U-E	TU2C-LINK Control
Analog Interface	TCB-IFCB640TLE	
BN Interface	BMS-IFBN640TLE	
	BMS-IFBN1280U-E	TU2C-LINK Control

2-1. Selection flow chart

2-2. Combination conditions for indoor unit and outdoor unit

Indoor unit can connect 80 % to 130 % of Outdoor unit capacity.

2-2-1. For indoor unit, the capacity code is decided for each capacity rank.

Capacity rank type		005	007	009	012	015	018	024	027	030	036	048	056	072	096
Capacity code	Equivalent to HP	0.6	0.8	1.0	1.25	1.7	2.0	2.5	3.0	3.2	4.0	5.0	6.0	8.0	10.0

NOTE:

Capacity rank : Correspondence to Btu/h. Capacity code : Correspondence to Horsepower.

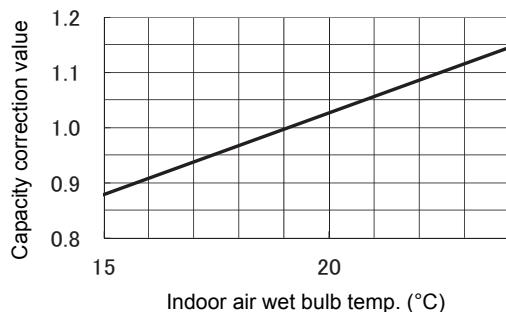

2-2-2. For outdoor unit, maximum No. of connectable indoor units and total capacity code of indoor units are decided.

Outdoor unit capacity type	Capacity code Equivalent to HP	No. of connectable indoor units	Total capacity code of connectable indoor units	
			Min. (HP)	Max. (HP)
MCY-MHP0806HS8*	8	2 to 12	6.4	10.4
MCY-MHP1006HS8*	10	2 to 16	8.0	13.0 (When the number of indoor units is 2 to 12) 11.0 (When the number of indoor units is 13 to 16)

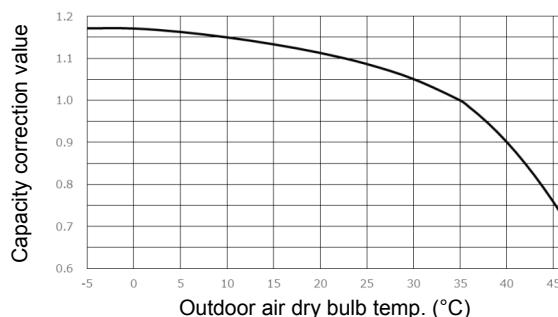

2-3. Cooling / heating capacity characteristics

2-3-1. Correction charts for cooling capacity calculation

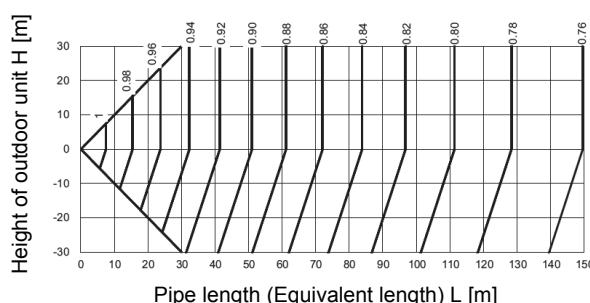

[1] Capacity correction value vs. indoor air wet bulb temperature

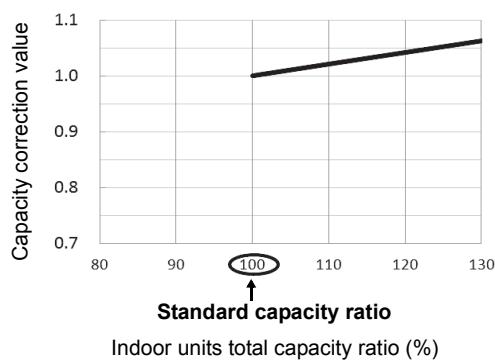

[2] Capacity correction value vs. outdoor air dry bulb temperature

[3] Capacity correction value vs. connecting pipe length and lift difference between indoor and outdoor units

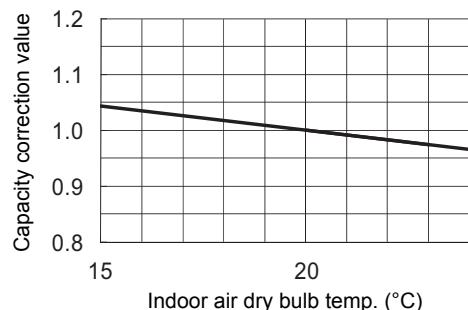

[4]* Correction of outdoor unit diversity

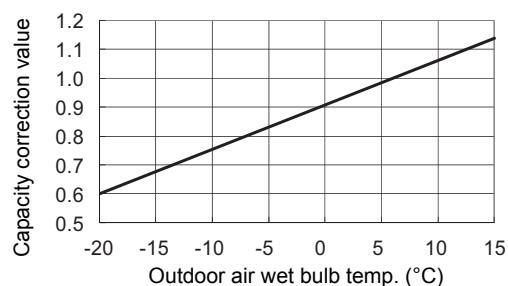

* : Coefficient to use for correction of outdoor unit capacity when total capacity of the indoor units are not equal to the outdoor unit capacity.

2-3-2. Correction charts for heating capacity calculation

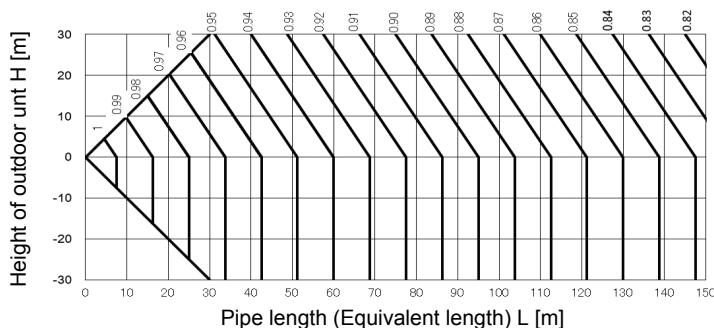

[1] Capacity correction value vs. indoor air dry bulb temperature

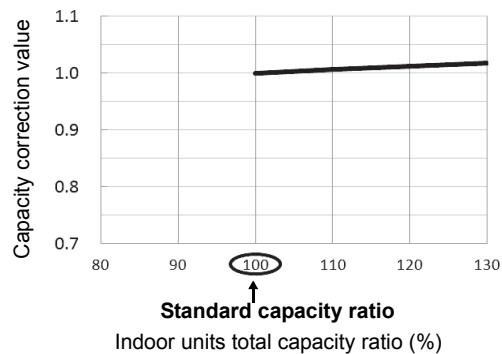

[2] Capacity correction value vs. outdoor air wet bulb temperature

[3] Capacity correction value vs. connecting pipe length and lift difference between indoor and outdoor units

[4]* Correction of outdoor unit diversity

* : Coefficient to use for correction of outdoor unit capacity when total capacity of the indoor units are not equal to the outdoor unit capacity.

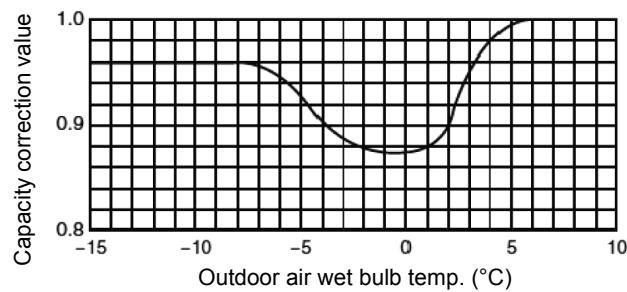

2-3-3. Capacity correction in case of frost on the outdoor heat exchanger in heating

Correct the heating capacity when frost was found on the outdoor heat exchanger.

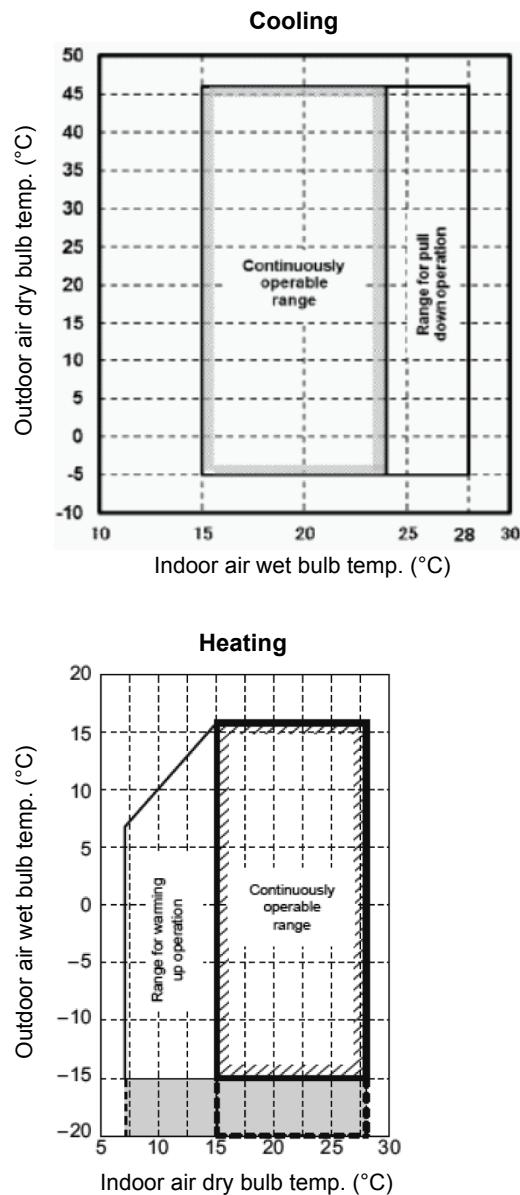

Heating capacity = Capacity after correction of outdoor unit x Correction value of capacity resulted from frost

(Capacity after correction of outdoor unit: Heating capacity calculated in the above item 2.)

[5] capacity correction in case of frost on the outdoor heat exchanger

2-4. Operational temperature range

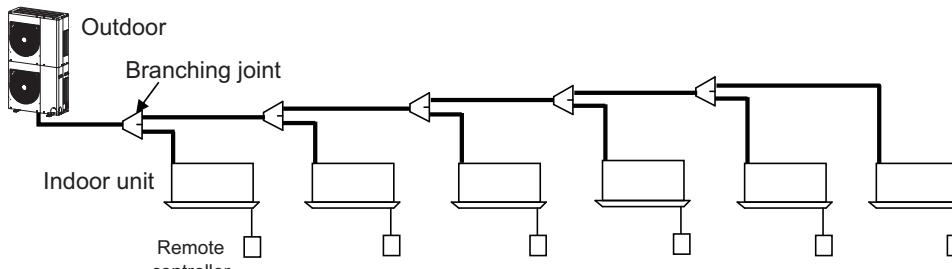

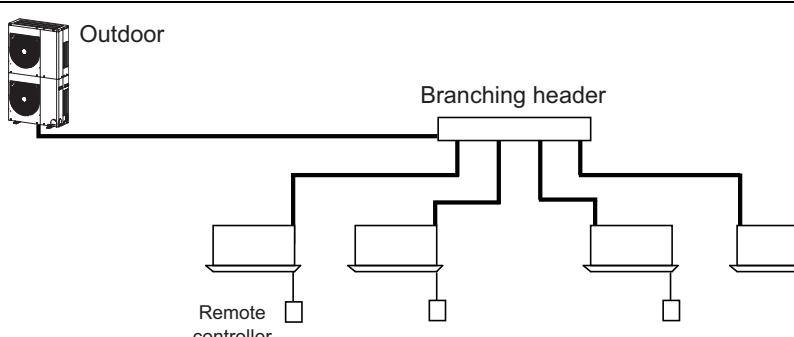

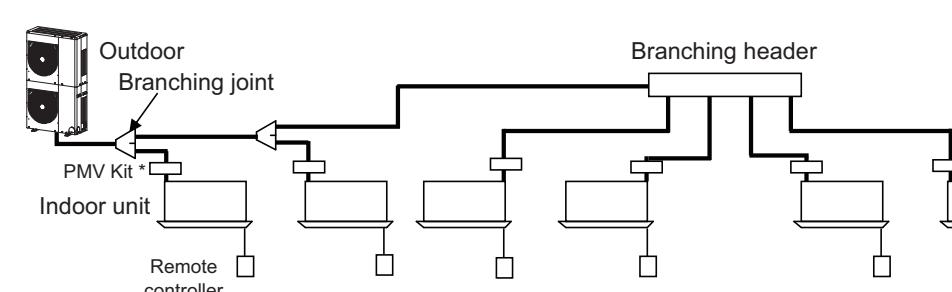

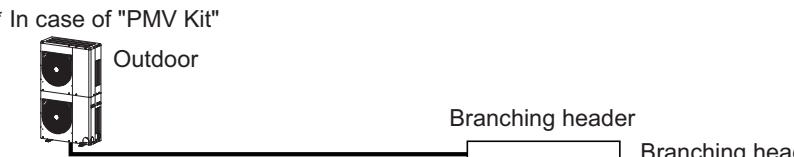

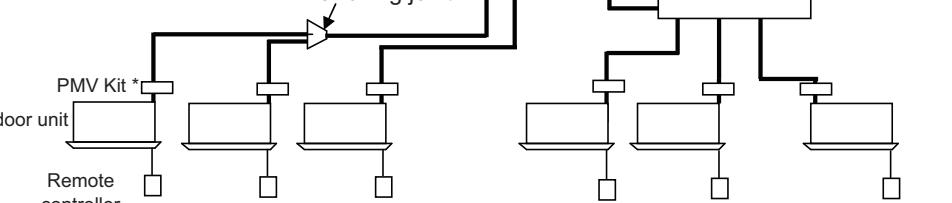

The unit will operate down to an outdoor temperature of -20 °C, however considerable performance decrease will be expected below -15 °C. Therefore please consider installation location/surroundings and system design when expected to operate between -15 °C and -20 °C.

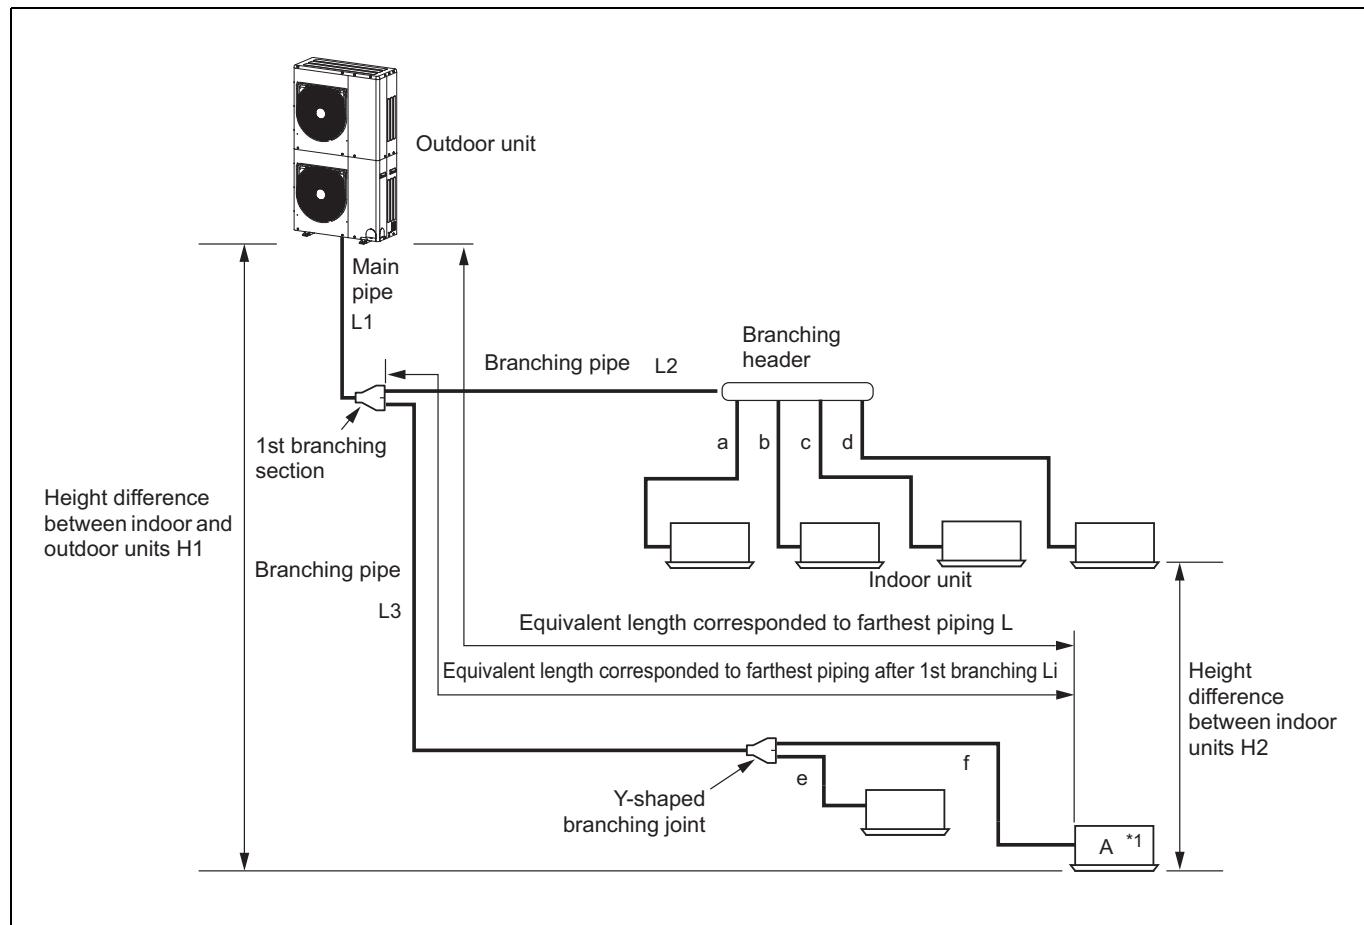

3-1. Free branching system

- [1] Line branching system
- [2] Header branching system
- [3] Header branching system after line branching
- [4] Line branching system after header branching
- [5] Header branching system after header branching

The above five branching systems enable to dramatically increase the flexibility of refrigerant piping design.

Line branching system	
Header branching system	
Header branching system	* In case of "PMV Kit" 
Line branching system after header branching	* In case of "PMV Kit" 
Header branching system after header branching	

3-2. Allowable length / height difference of refrigerant piping

		Allowable value	Pipes
Piping Length	Total extension of pipe (liquid pipe, real length)	300 m	$L1 + L2 + L3 + a + b + c + d + e + f$
	Furthest piping length L (*1)	Real length Equivalent length	$L1 + L3 + f$
	Max. equivalent length of main pipe	80 m *2	$L1$
	Max. equivalent length of furthest piping from 1st branching Li (*1)	40 m	$L3 + f$
Height Difference	Max. real length of indoor unit connecting pipe	15 m	a, b, c, d, e, f
	Height between indoor and outdoor units H1	Upper outdoor unit Lower outdoor unit	30 m *2 30 m *2
	Height between indoor units H2	15 m	

*1 Furthest indoor unit from 1st branch to be named "A".

*2 The main liquid pipe size varies depending on L1 and H1. See the page of "Selection of refrigerant piping" for details.

3-3. Selection of refrigerant piping

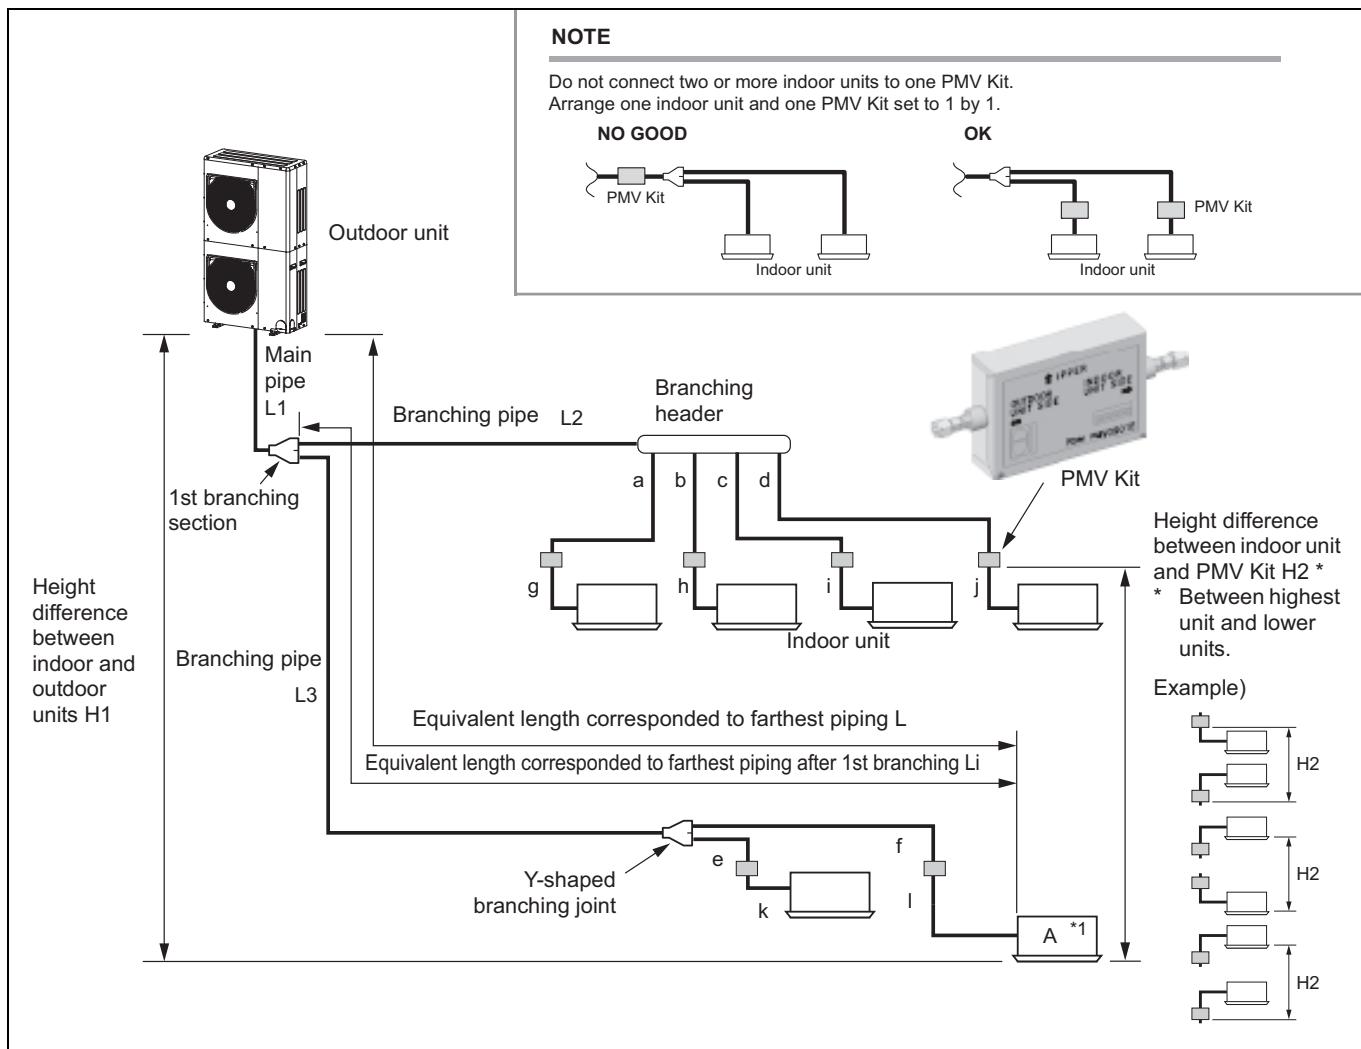

No.	Piping parts	Name	Selection of pipe size				Remarks		
(1)	Outdoor unit ↓ 1st branching section	Main pipe	0806 type				* The main liquid pipe size differs based on outdoor unit capacity type, equivalent length of main pipe, and hight difference between outdoor and indoor units.		
Conditions for size of main pipe selection *				Size of main pipe		19.05	* The main liquid pipe size differs based on outdoor unit capacity type, equivalent length of main pipe, and hight difference between outdoor and indoor units.		
Height between indoor and outdoor units H1(m)		Equivalent length of main pipe L1(m)		Gas pipe		9.52	The main liquid pipe size differs based on outdoor unit capacity type, equivalent length of main pipe, and hight difference between outdoor and indoor units.		
30 ≥ H1 > 20		40 > L1		12.70					
L1 ≥ 40		60 > L1		9.52					
20 ≥ H1 > 10		L1 ≥ 60		12.70					
10 ≥ H1 > 0		No condition		9.52					
1006 type				Conditions for size of main pipe selection *		Size of main pipe			
Height between indoor and outdoor units H1(m)		Equivalent length of main pipe L1(m)		Gas pipe		Liquid pipe			
30 ≥ H1 > 20		30 > L1		9.52		12.70			
L1 ≥ 30		L1 ≥ 40		9.52		12.70			
20 ≥ H1 > 10		40 > L1		12.70		9.52			
10 ≥ H1 > 0		L1 ≥ 40		50 > L1		12.70			
Pipe size between branching sections				Total capacity codes of indoor units at down stream side		Gas pipe			
Equivalent to HP		Equivalent to capacity		Liquid pipe					
Below 2.4		Below 6.6		12.70		9.52			
2.4 to below 6.4		6.6 to below 18.0		15.88		9.52			
6.4 or more		18.0 or more		22.22		12.70			
* When exceed the main pipe size, use the same size as the main pipe.									

3 Refrigerant piping design

No.	Piping parts	Name	Selection of pipe size			Remarks
(3)	Branching section ↓ Indoor unit	Indoor unit connecting pipe	Connecting pipe size of indoor unit			
			Capacity rank	Gas pipe	Liquid pipe	
			005 to 012 type	9.52	6.35	
			015 to 018 type	12.70	6.35	
			024 to 056 type	15.88	9.52	
			072 to 096 type	22.2	12.7	
(4)	Branching section	Y-shaped branching joint	Selection of branching section (Y-shaped branching joint)			
				Total capacity codes of indoor units at down stream side	Model name	
				Equivalent to HP	Equivalent to capacity	
			Y-shape branch joint	Below 6.4	Below 18.0	RBM-BY55E
				6.4 or more	18.0 or more	RBM-BY105E
(5)	Branching section	Branching header	Selection of branching section (Branching header)			
					Model name	
			Branching header	For 4 branches	RBM-HY1043E	
				For 8 branches	RBM-HY1083E	

3-4. Allowable length / height difference of refrigerant piping with PMV Kit

		Allowable value	Pipes
Piping Length	Total extension of pipe (Liquid pipe, real length)	250 m	$L1 + L2 + L3 + a + b + c + d + e + f + g + h + i + j + k + l$
	Furthest piping length L (*1)	Real length Equivalent length	100 m 130 m
	Max. equivalent length of main pipe	70 m *2	L1
	Max. equivalent length of furthest piping from 1st branching Li (*1)	30 m	L3 + f + l
	Max. real length of indoor unit connecting pipe	15 m	a + g, b + h, c + i, d + j, e + k, f + l
	Real length between PMV Kit and indoor unit	2 m or more Below 10 m	g, h, i, j, k, l
Height Difference	Height between indoor and outdoor units H1	Upper outdoor unit Lower outdoor unit	30 m *2 30 m *2
	Height between indoor units (PMV Kit) H2	15 m	

*1 Furthest indoor unit from 1st branch to be named "A".

*2 The main liquid pipe size varies depending on L1 and H1. See the page of "Selection of refrigerant piping" for details.

3-5. Selection of refrigerant piping with PMV Kit

No.	Piping parts	Name	Selection of pipe size				Remarks	
(1)	Outdoor unit ↓ 1st branching section	Main pipe	0806 type				* The main liquid pipe size differs based on outdoor unit capacity type, equivalent length of main pipe, and height difference between outdoor and indoor units.	
			Conditions for size of main pipe selection *		Size of main pipe			
			Height between indoor and outdoor units H1(m)	Equivalent length of main pipe L1(m)	Gas pipe	Liquid pipe		
			30 ≥ H1 > 20	40 > L1	19.05	9.52		
				L1 ≥ 40		12.70		
			20 ≥ H1 > 10	60 > L1		9.52		
				L1 ≥ 60		12.70		
			10 ≥ H1 > 0	No condition		9.52		
			1006 type					
			Conditions for size of main pipe selection *		Size of main pipe			
			Height between indoor and outdoor units H1(m)	Equivalent length of main pipe L1(m)	Gas pipe	Liquid pipe		
(2)	Branching section ↓ Branching section	Branching pipe	30 ≥ H1 > 20	30 > L1	22.22	9.52	Pipe size differs based on the total capacity code value of indoor units at the downstream side. If the total value exceeds the capacity code of the outdoor unit, apply the capacity code of the outdoor unit.	
				L1 ≥ 30		12.70		
			20 ≥ H1 > 10	40 > L1		9.52		
				L1 ≥ 40		12.70		
			10 ≥ H1 > 0	50 > L1		9.52		
				L1 ≥ 50		12.70		
(3)	Branching section ↓ Indoor unit	Indoor unit connecting pipe	Pipe size between branching sections				* When exceed the main pipe size, use the same size as the main pipe.	
			Total capacity codes of indoor units at down stream side		Gas pipe	Liquid pipe		
			Equivalent to HP	Equivalent to capacity				
			Below 2.4	Below 6.6	12.70	9.52		
			2.4 to below 6.4	6.6 to below 18.0	15.88	9.52		
			6.4 or more	18.0 or more	22.22	12.70		

3 Refrigerant piping design

No.	Piping parts	Name	Selection of pipe size			Remarks		
(4)	Branching section	Y-shaped branching joint	Selection of branching section (Y-shaped branching joint)					
					Total capacity codes of indoor units at down stream side			
			Equivalent to HP	Equivalent to capacity	Model name			
(5)	Branching section	Branching header	Selection of branching section (Branching header)					
					Model name			
(6)	PMV Kit	PMV Kit	Selection of PMV Kit					
					Model name			
			Indoor unit capacity type	Model name				
005 to 012 type			RBM-PMV0363E RBM-PMV0361U-E					
015 to 027 type			RBM-PMV0903E RBM-PMV0901U-E					
* PMV kit can be connected less than 027 type FCU.								

3-6. Charging requirement with additional refrigerant

After finishing vacuuming, exchange the vacuum pump with a refrigerant canister and start additional charging of refrigerant.

Refrigerant amount charged in factory

Outdoor unit type	0806HS8	1006HS8
Charging amount (kg)	4.4	4.4

Calculation of additional refrigerant charge amount

Refrigerant charge amount factory default does not include the refrigerant for pipes at the local site.

For refrigerant to be charged in pipes at the local site, calculate the amount and charge it additionally.

NOTE

When the additional refrigerant amount indicates minus as the result of calculation, it is not necessary to subtract any refrigerant.

Calculating formula

$$\text{Additional refrigerant charge amount at local site (kg)} = \text{Real length of liquid pipe} \times \text{Additional refrigerant charge amount per 1 m liquid pipe (Table 1)} + \text{Corrective amount of refrigerant depending on the indoor units (Table 2)} + \text{Compensation by outdoor HP (Table 3)}$$

Table 1

Liquid pipe dia. (mm)	6.35	9.52	12.70
Additional refrigerant amount /1 m liquid pipe (kg / m)	0.025	0.055	0.105

Table 2

Indoor unit model name	Capacity rank	005	007	009	012	015	018	024	027	030	036	048	056	072	096

Table 3

Outdoor unit type	0806HS8	1006HS8
Compensation by outdoor HP (kg)	-1.0	-1.0

4-1. General

- The appliance shall be installed in accordance with national wiring regulations.
Capacity shortages of the power circuit or an incomplete installation may cause an electric shock or fire.
- Perform wiring of power supply complying with the rules and regulations of the local electric company.
- Never connect AC voltage power to the control wiring terminal block (U1, U2, U3, U4); otherwise the unit may break down.
- Be sure that electric wiring does not come into contact with high-temperature parts of piping; otherwise the coating of cables may melt and cause an accident.
- Locate wiring system for the control and refrigerant piping system in the same line.
- Do not turn on the power supply of the indoor units until vacuuming of the refrigerant pipe has finished.
- For the wiring of power to indoor units and that between indoor and outdoor units, follow the instructions in the installation manual of each indoor unit.

4-2. Electrical wiring design

Determine the wire size for the indoor unit according to the number of connected indoor units downstream.

4-3. Outdoor unit power supply

Electrical characteristics

Model name	Normal Voltage (V-Ph-Hz)	Voltage Range		Compressor	Fan Motor	Power Supply	
		Min	Max	kW	kW	MCA	MOCP
MCY-MHP0806HS8-E	380 to 415 - 3 - 50	342	456	5.60	0.100 × 2	17.0	20.0
MCY-MHP1006HS8-E	380 to 415 - 3 - 50	342	456	5.60	0.100 × 2	20.0	25.0

MCA : Maximum Circuit Amps

MOCP : Maximum Overcurrent Protection (Amps)

4-4. Indoor unit power supply

Electrical characteristics (50Hz)

Type	Model name	Normal Voltage (V-Ph-Hz)	Voltage Range		Fan Motor		Power Supply	
			Min	Max	kW	FLA	MCA	MOCP

MCA : Minimum Circuit Amps FLA : Full Load Amps

MOCP : Maximum Overcurrent Protection (Amps) kW : Fan motor Rated Output (kW)

• Wiring size

Must be independent from the outdoor unit power supply

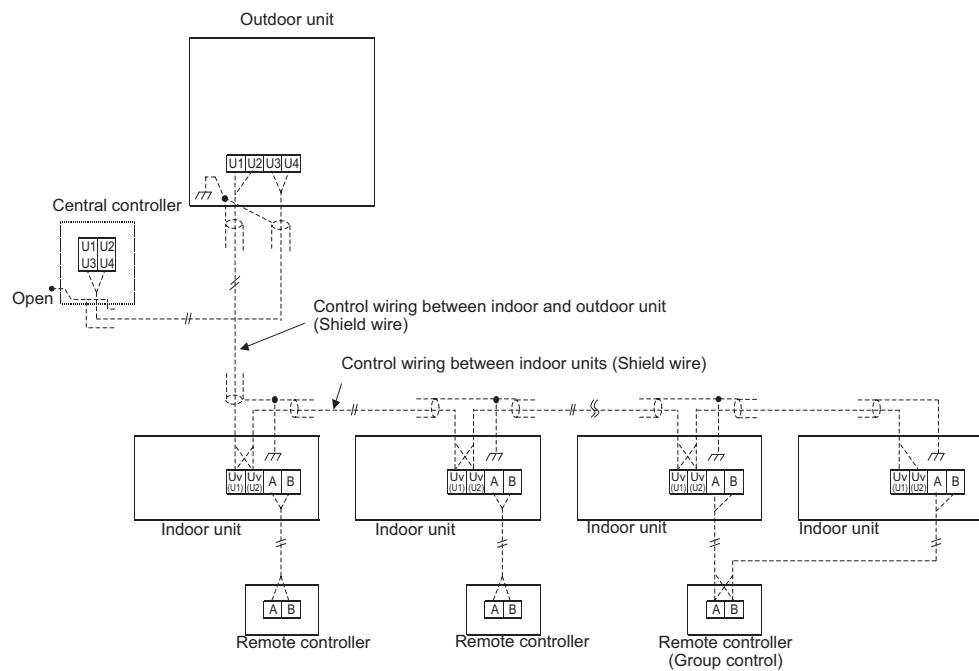

Model	Power supply wiring			
	Wire size			
All models of indoor units	2.0 mm ² (AWG#14)	Max. 20 m	3.5 mm ² (AWG#12)	Max. 50 m

NOTE:

The above connecting lengths stated in the table, indicate the length from the isolator to the outdoor unit. When the power supply of the indoor units are connected in parallel, it is assumed that no more than a 2 % voltage drop will occur. If the connecting length is to exceed the stated lengths, select a suitable wire in accordance with the local wiring standards.

4-5. Design of control wiring

4-5-1. Summary of control wiring

Control wiring and central control wiring use 2-core non-polarity wires.

Use 2-core shield wires to prevent noise trouble.

In this case, for the system grounding, close (connect) the end of shield wires, and isolate the end of terminal.

Use 2-core non-polarity wire for remote controller. (A, B terminals)

Use 2-core non-polarity wire for wiring of group control. (A, B terminals)

4-5-2. Restriction of control wiring

Keep the rule of below tables about size and length of Control wiring.

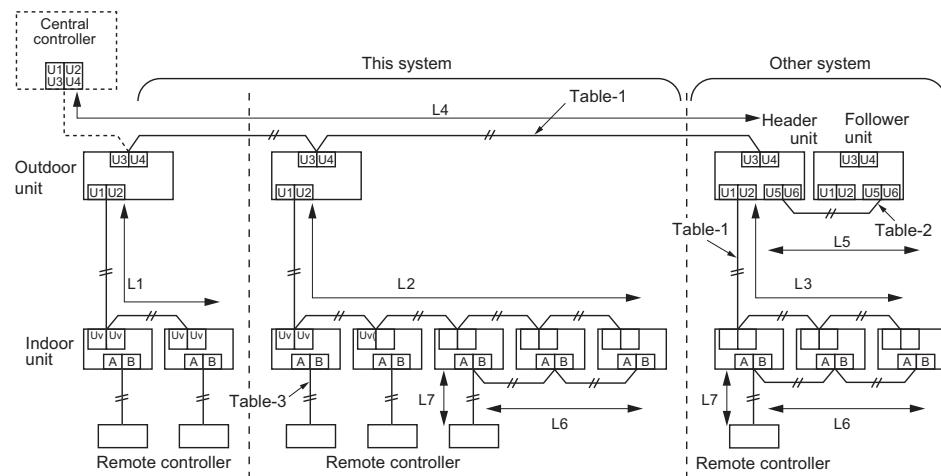

Table-1 Control wiring between indoor and outdoor units (L1, L2, L3), Central control wiring (L4)

Wiring	2-core, non-polarity
Type	Shield wire
Size/Length ^{*1}	1.25 mm ² : Up to 1000 m 2.0 mm ² : Up to 2000 m

(*1): Total of control wiring length for all refrigerant circuits (L1 + L2 + L3 + L4)

Table-2 Control wiring between outdoor units (L5) (Other system)

Wiring	2-core, non-polarity
Type	Shield wire
Size/Length	1.25 mm ² to 2.0 mm ² Up to 100 m (L5)

Table-3 Remote controller wiring (L6, L7)

Wire	2-core
Size	0.5 mm ² to 2.0 mm ²
Length	Up to 500 m (L6 + L7) Up to 400 m with of wireless remote controller in group control. Up to 200 m total length of control wiring between indoor units (L6)

4-5-3. Group control through a remote controller

Group control of multiple indoor units (8 units) through a single remote controller

				Low-pressure sensor / P.C. board fuse	Low-pressure sensor / P.C. board fuse		
Electrical specifications	Unit	MCA	(*)4)	A	17.0		
		MOCP	(*)5)	A	20.0		
Refrigerant piping	Connecting port diameter	Gas side (main pipe)		mm	19.1		
		Liquid side (main pipe)		mm	9.5		
	Connecting method	Gas side			Flare		
		Liquid side			Flare		
	Connecting piping diameter	Gas side		mm	19.1		
		Liquid side		mm	9.5 (*7)		
Total extension of piping				m	300		
Max. No. of connected indoor units					12		
Connectable FCU diversity				80 % - 130 %	80 % - 130 %		
Sound pressure level		Cooling		dB(A)	58		
		Heating		dB(A)	59		
	Night operation (*9) (Sound reduction) control	Cooling		dB(A)	50		
		Heating		dB(A)	50		
Sound power level		Cooling		dB(A)	75		
		Heating		dB(A)	75		
	Night operation (*9) (Sound reduction) control	Cooling		dB(A)	67		
		Heating		dB(A)	67		
Operation temperature range		Cooling		CDB	-5 to 46		
		Heating		CWB	-20 to 15		

(*)1) Rated conditions Cooling : Indoor 27 degC Dry Bulb /19 degC Wet Bulb, Outdoor 35 degC Dry Bulb.
Heating : Indoor 20 degC Dry Bulb, Outdoor 7 degC Dry Bulb / 6 degC WetBulb.

The standard pipe means that equivalent piping length of 7.5 m and standard 0 m piping height difference.

(*)2) The source voltage must not fluctuate more than ±10 %.

(*)3) The amount dose not consider extra piping length.

Refrigerant must be added on site in accordance with the actual piping length.

(*)4) Select wire size base on the larger value of MCA.

(*)5) MOCP : Maximum overcurrent protection (Amps)

(*)6) Attach a socket of 19.1 - 22.2 mm to the ball valve. For its details, refer to Installation Manual.

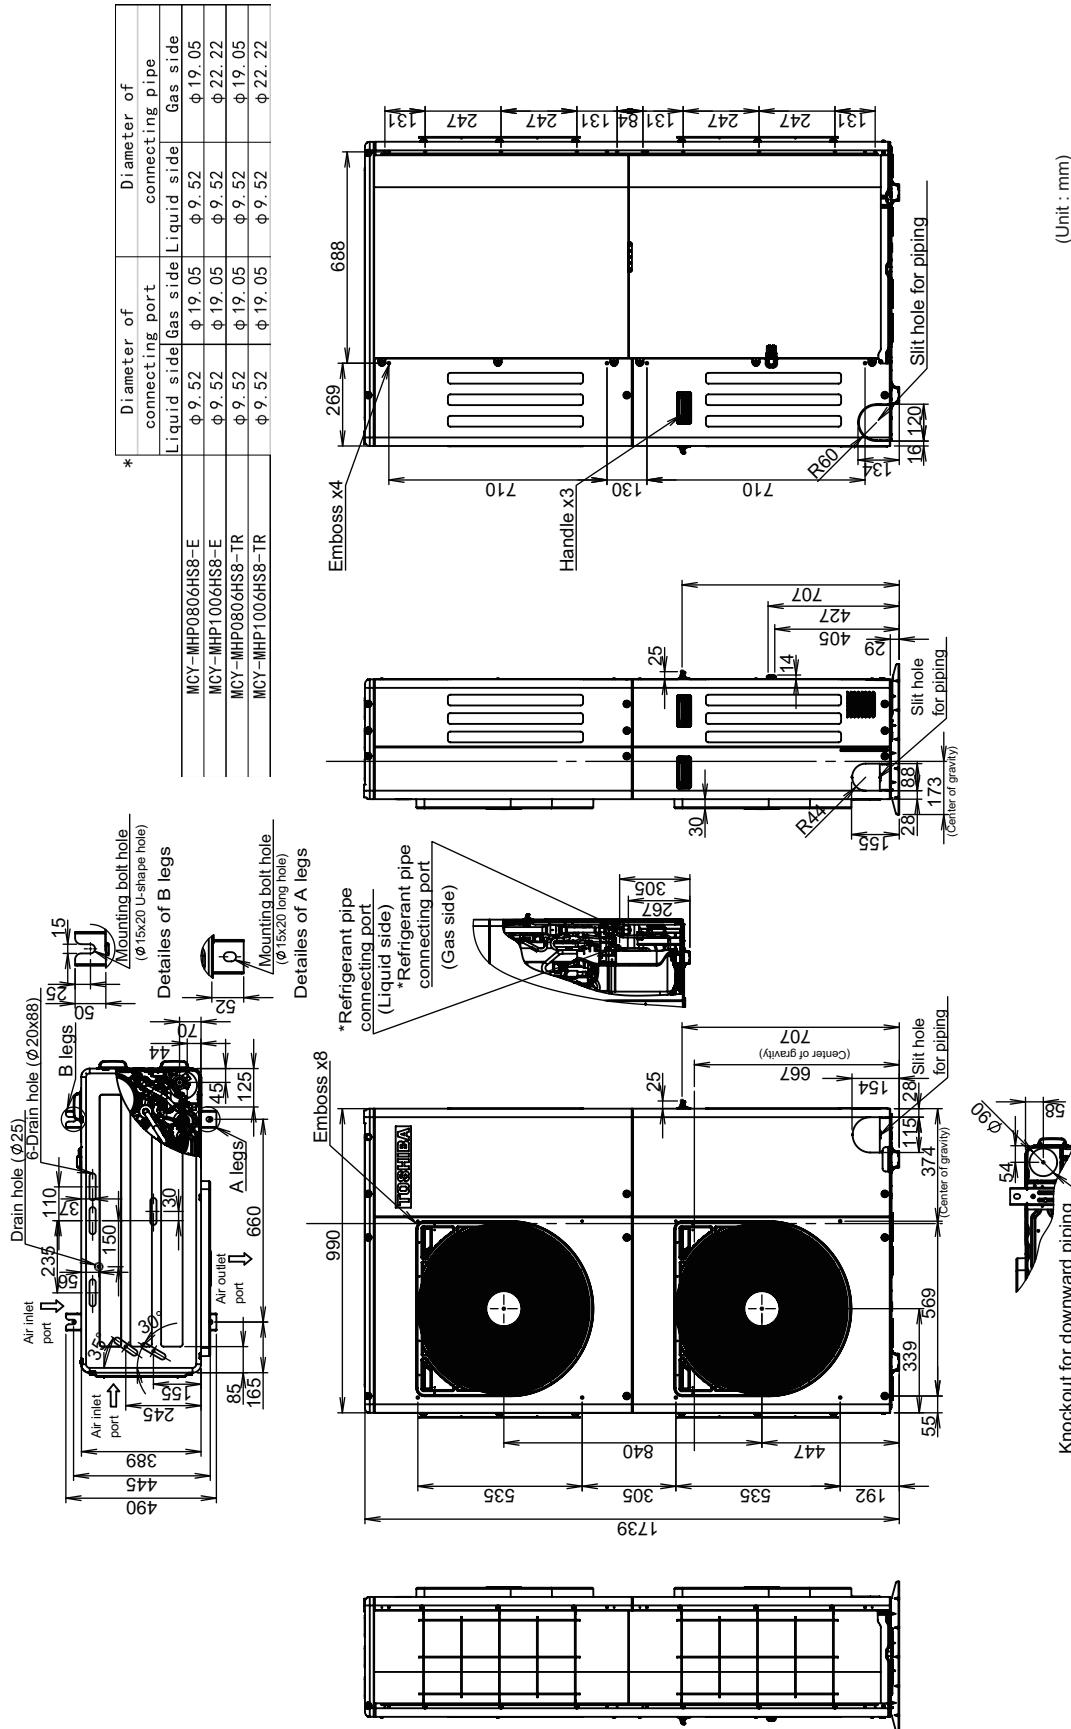

(*)7) Depending on the installation conditions, the liquid pipe dia. needs to be increased. For its details, refer to Installation Manual.

(*)8) When the No. of connecting indoor units exceeds 12, maximum total capacity code of indoor units will be 11.

(*)9) Need to prepare for optional control P.C. board.

Outdoor temperature: 7 °C DB, 6 °C WB
Indoor air temperature: 20 °C DB

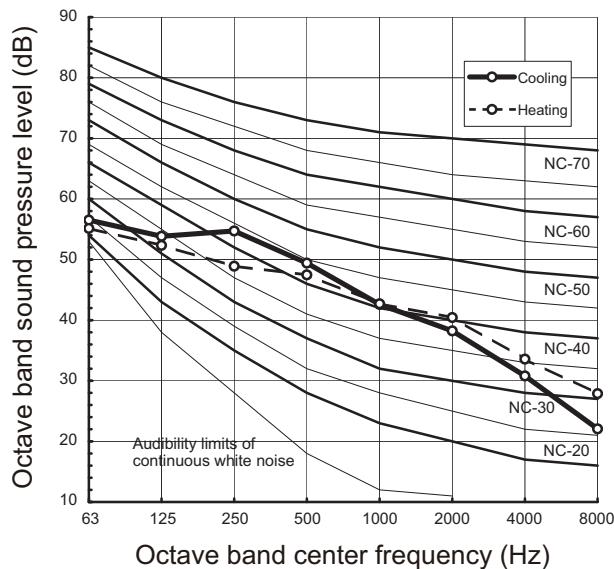

This sound pressure level are measured in an anechoic chamber in accordance.

5-10. PMV Kit

PMV-Kit (RBM-PMV0363E, RBM-PMV0903E, RBM-PMV0361U-E, RBM-PMV0901U-E) shall be required for quieter place application as an optional to reduce refrigerant sound especially in oil retrieval control or in transient operation as start up.

5-10-1. Selection

Model name	Indoor unit capacity type	Diameter of refrigerant pipe
RBM-PMV0363E, RBM-PMV0361U-E	005 to 012 type	ø6.4
RBM-PMV0903E, RBM-PMV0901U-E	015 to 018 type	ø6.4
	024 to 027 type	ø9.5

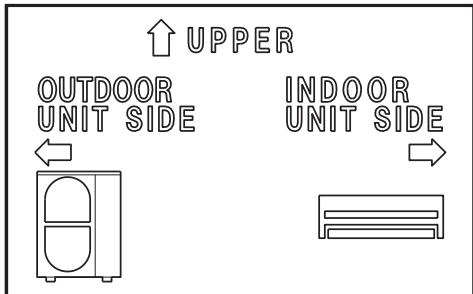

Allowable length of refrigerant piping

Note)

Do not connect two or more indoor units to one PMV Kit. Arrange one indoor unit and one PMV Kit set to 1 by 1.

Label

Piping material and dimensions

Model name	Indoor unit capacity type	Diameter of refrigerant pipe	Notes
RBM-PMV0363E, RBM-PMV0361U-E	005 to 012 type	ø6.4	
RBM-PMV0903E, RBM-PMV0901U-E	015 to 018 type	ø6.4	
	024 to 027 type	ø9.5	

CAUTION

When connecting ø9.5 refrigerant pipes, be sure to insert a seal pipe between PMV main unit and the joint. If the seal pipe is not inserted, refrigerant leakage is caused.

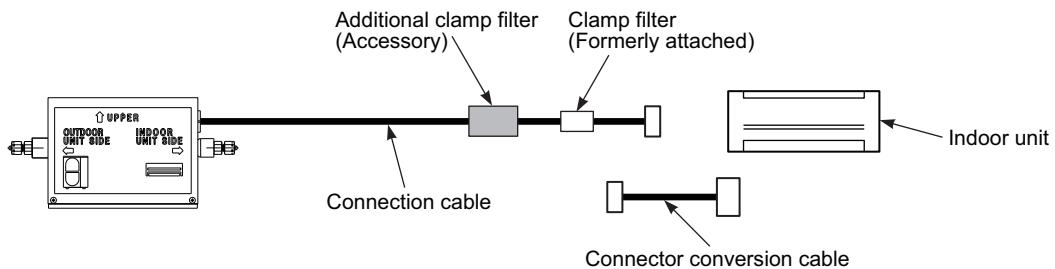

5-10-2. Wiring connections

For this product, the connector conversion cable and additional clamp filter (Accessory) are used according to the indoor unit to be connected.

For the corresponding unit and how to use the conversion cable and clamp filter, refer to the following description.

The connector conversion cable is not used for the indoor unit, but the additional clamp filter is used.

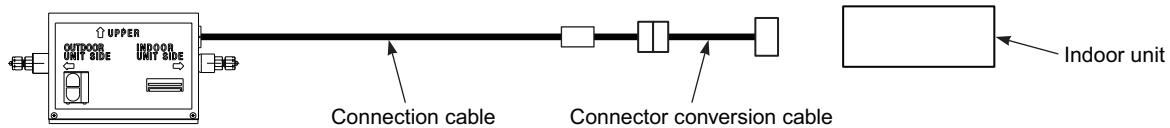

High Wall Type 3 series (MMK-AP***3H*)

- Mount the clamp filter (Accessory) to the connection wire (11 m) out of the PMV kit main body. Refer to the mounting method.
- Remove the connector conversion cable mounted to the connection cable out of the PMV kit main body and then connect it.

The additional clamp filter is not used for the indoor unit, but the connector conversion cable is used.

Indoor unit except above indoor units

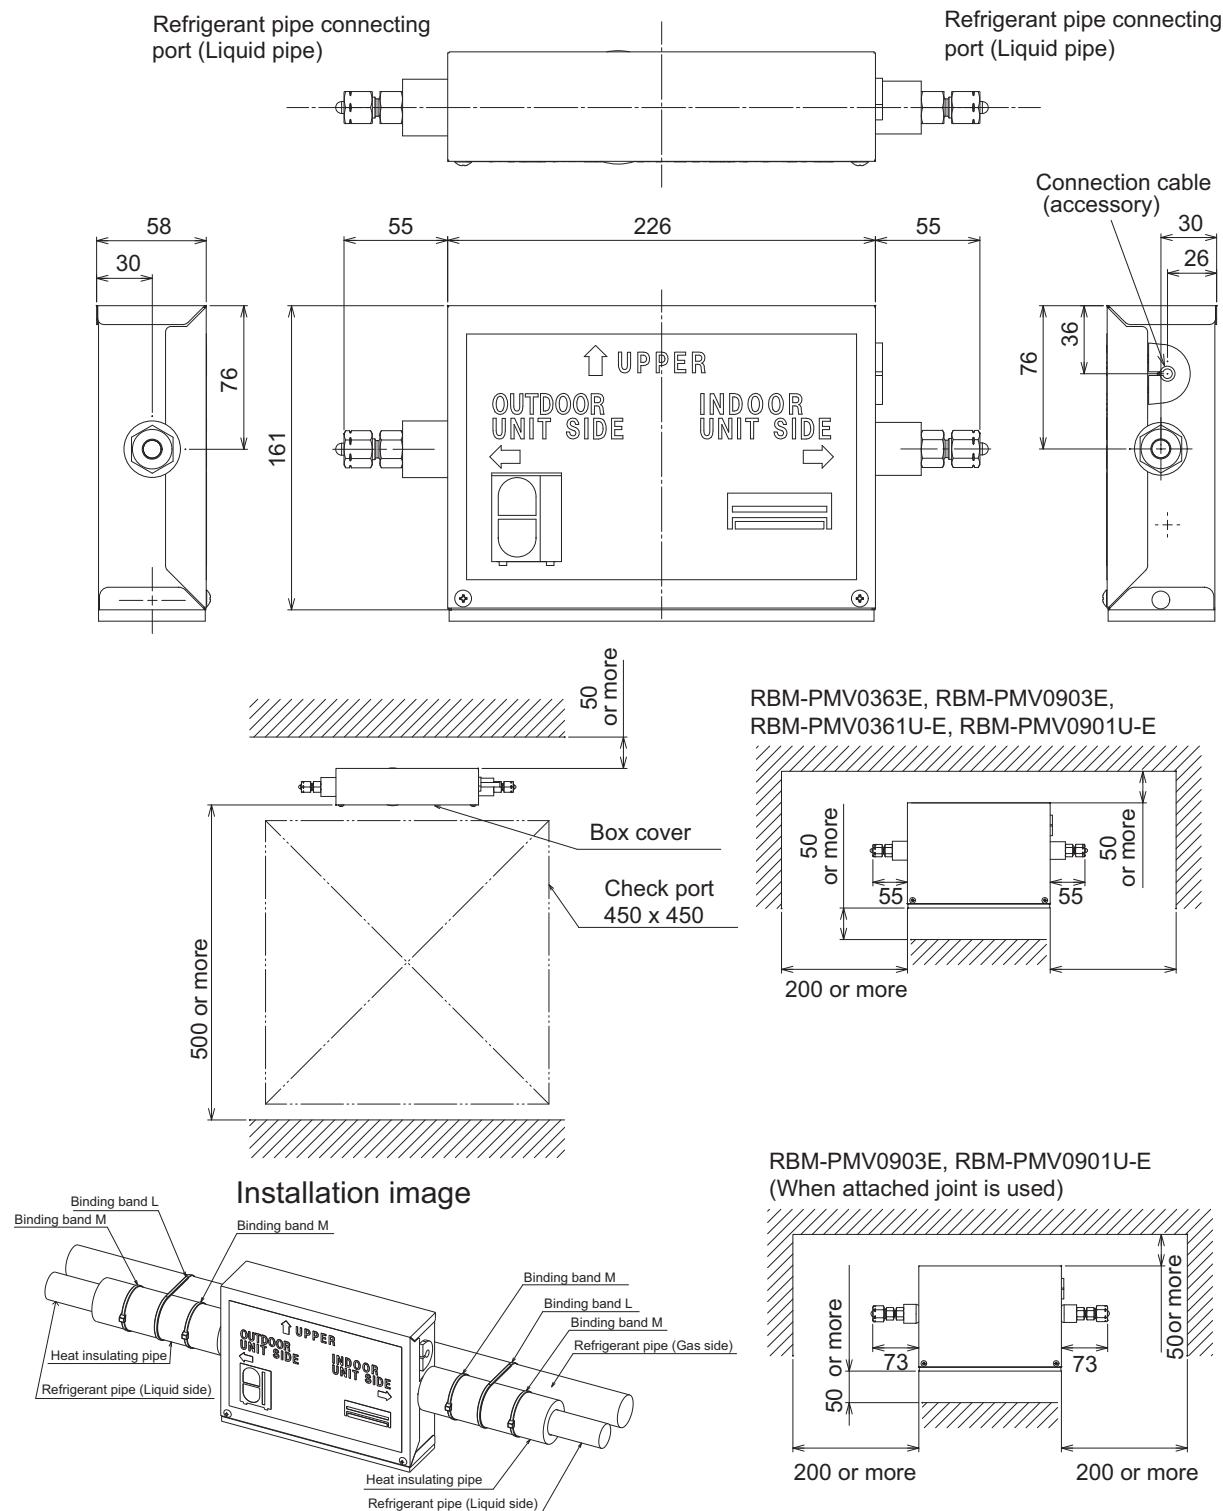

5 Outdoor unit
